

# CINNERATE

*Cinerate™ is a broad-spectrum acaricide, fungicide and insecticide of botanical origin that has a powerful shock effect for controlling pests and diseases*

## PRODUCT FEATURES

- Category: fungicide, acaricide, insecticide
- Fast-acting product which gets good control at low concentrations
- Contact miticide

## BENEFITS OF CINNAMON OIL & POTASSIUM OLEATE

- As insecticide and acaricide, it penetrates and destroys the soft susceptible body parts. Insects and mites are exposed to the loss of body fluids causing dehydration and consequently the death.
- As a fungicide-cinnamic aldehyde inhibits mycelial growth and prevents germination of fruiting bodies, eradicating fungus and preventing its spread.
- Knock down effect against high-impact diseases and pests such as powdery mildew, mildew, thrips and other insects and mites
- Cinerate™ breaks the sporulation and prevents the spread of fungi
- Cinerate™ is a tool to be included in IPM strategies (Integrated Pest Management) and resistance management strategies

TECHNICAL SPECS	
Certifications	OMRI
Guaranteed Analysis	60.0 % Cinnamon Oil 40.0 % Potassium oleate
pH	5.42
EC	0.017
Form	Liquid
Appearance	Yellow
Available Variants	2.5 gal

## FOR BEST RESULTS

- Read product label and follow all instructions
- compatible with biological control agents
- Apply in the early morning or late afternoon / evening
- Spray directly onto pest(s) or pathogen(s)
- Apply before noticeable foliar pest damage occurs
- Thorough spray coverage is essential for good pest control
