F002369

Phosphate, Available as (P2O5) Calcium (Ca)

DERIVED: CALCIUM PHOSPHATE

8.00% 30.0%

### PRODUCT DESCRIPTION

This is a dry input mine mineral without additives, fillers, or chemical processing. We mechanically process the raw mine Rock Phosphate mineral to arrive at a powder. The raw mineral and mechnically processed powder Phosphate may be used to address Phosphate needs in the soil.

#### APPLICATION RECOMMENDATIONS

For best results, this product must be used in conjunction with a proper Soil and Sap Test Analysis and applied according to test results for the crop type, crop height, and PPM change required. Properly balancing nutrients by simultaneously lowering all excess and raising all deficient nutrient PPMs is critical to long-lasting beneficial results in any crop.

Depending on the PPM change needed, raw mine mineral possible rates are 200-2000+ pounds per acre. Possible powder rates are as follows: If by foliar, 0.5 to 5+ pounds per acre with a minimum of 35 gallons of water. If by fertigation injection, 0.5 to 5+ pounds per acre. If by aerial, 3 to 5 pounds per 5 gallons of water used per acre. Individual plants, top dress pots with 1-3 tbsp. Grow media, 1-3oz per cubic foot. Rates subject to excesses, i.e., salts, chlorides, metals, sulfur, etc. Please note: raw minerals are abrasive materials and may damage equipment seals if improper equipment is used

Information regarding the contents and levels of metals in this product is available on the internet at http://www.aapfco.org/metals.html.
